

2 DOUBLE IMPACT! **BIO-ATTACK!**

BIOFIBER DECOMPOSITION NANOFERRITE AND ELIMINATION

5 layer filter completely removes air pollution and unpleasant odors

Primary filter

Biofiber filter

Nanoferrite filter

Ion-exchange deodorizing filter

Powerful suction

Anti-germ filter with aloe and chitosan, coulomb-HEPA filter

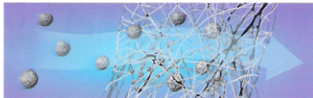

A STEP TOWARD A NEW METHOD OF DISINFECTING

Double-action "decomposition" and "elimination" cleans the air of allergens, microorganisms and viruses.

ALLERGENS... (pollen, house dust mites, etc.)

BIOFIBER FILTER

Thanks to bio-technology, there now exist "artificial ferments" that powerfully decompose and decompose them. These ferments are also effective against microorganisms.

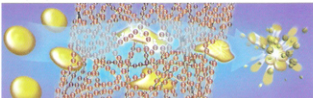

1. The "artificial ferments" on the filter surface are ready and waiting to absorb allergenic proteins.
2. The allergens try to escape, but are enveloped by the "artificial ferments".
3. The "artificial ferments" decompose the allergenic proteins and grind up the allergens.

GERMS AND VIRUSES

NANOFERRITE FILTER

This filter not only draws in germs that settle on its surface the way previous filters did, but also removes germs and viruses which penetrate inside. Microorganisms and viruses, exposed to a powerful nanoferrite generated magnetic field, are destroyed, disintegrating, as a result of a strong electromagnetic impulse.

1. A nanoferrite coating on the filter surface creates a magnetic field. This field suctions at the magnet to counter-attack microorganisms and viruses.
2. Once they are close enough to penetrate the nanoferrite field, germs or viruses are "hit" by pulses of electromagnetic radiation.
3. On passing through this radiation, the germs and viruses are broken up and destroyed.

CREATING HEALTHY AIR

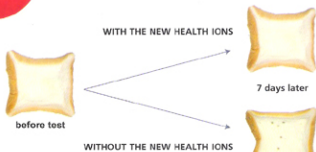

Preventing the spread of fungi creates healthy air

THE NEW "HEALTH IONIZER"

The new "health ionizer" considerably enhances the use of negative ions

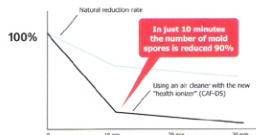

The elimination of mold spores creates a healthy breathing atmosphere in the room

Proven effective on bread. See the fungi removal effect in action!

- Test method: two slices of bread were compared by placing them in separate containers—one under the effect of the "New health ionizer", the other not. (Note: it is impossible to eliminate visible mold using an air cleaner).

The elimination of mold spores from room air.

- Test method: the air cleaner was turned on in a laboratory approximately 9 sq meters in area and the number of mold spores in the air was periodically measured.

- Contact organizations: Japanese Center for Food Safety Analysis.
